SOLUTIONS

We have a range of products adapted to your needs. Our devices can be adapted to work with water loops.

CHOOSE how to use **USE**

REMOTE & Semi plug-in

Market trends and technology development give us new possibilities for both large stores as well as smaller ones.

At JBG-2, we focus on high adaptability of our solutions – both PLUG-IN and REMOTE types are available.

Custom build pumping station

Connected with drycooler it enables transfer of waste energy from refrigeration system and dissipate it outside, saving energy on air conditioning.

Natural refrigerant chiller

Compact compressor unit connected to a plate heat exchanger, for supplying ice water to refrigeration devices using glycol solution.

FLOWpack

FLOWpack allows you to customize each REMOTE unit to work as SEMI-PLUGIN connected to the water loop. Thanks to this solution, we obtain the possibility of connecting each JBG-2 unit to the waste heat recovery system. The thermal energy obtained in this way can be used to support heating systems in the store.
